DETAILED ACTION

This Office Action is in response to preliminary amendments filed February 25, 2004. Claims 7, 9, 10, 23 and 24 are currently pending.

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claim 10 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant has failed to describe an embodiment in which a PMOS frame shutter in an N-well is comprised of NMOS transistors. As understood, PMOS frame shutter refers to the type of transistors (PMOS) that comprises the frame shutter. As such, the PMOS frame shutter cannot comprise NMOS transistors. This is further evidenced by the fact that NMOS transistors would not properly operate in an N-well and none of the figures show such an embodiment.

Claim Rejections - 35 USC § 103

Application/Control Number: 10/787,236 Page 3

Art Unit: 2878

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 7, 9, 23 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (Fig. 2), hereinafter, AAPA, in view of Berezin et al. (U.S. Patent 6,239,456).

Regarding claims 7, 9, 23 and 24, AAPA discloses (see Fig. 2) an active pixel sensor, comprising: a photoreceptor (105); a frame shutter (207), wherein the frame shutter is a PMOS frame shutter in an N-well; and an active pixel readout (230). AAPA also disclose (see Fig. 2) the frame shutter includes sample and hold and reset circuits; and the readout circuit comprising source follower and row select transistors. AAPA further disclose (see Fig. 2) the sample and hold and reset circuits are PMOS transistors. AAPA does not specifically disclose the photoreceptor as a pinned photodiode. Berezin et al. teach providing a pinned photodiode (see col. 1, lines 60-65 and col. 2, lines 5-10) in an active pixel sensor. Berezin et al. also recognize that pinned photodiodes have several advantages (see col. 2, lines 5-10). Thus, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide pinned photodiode in the apparatus of AAPA in view of Berezin et al. to provide a finer pixels as taught.

Conclusion

Art Unit: 2878

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh X. Luu whose telephone number is 571-272-2441. The examiner can normally be reached on M-F 6:30AM-4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Porta can be reached on 571-272-2444. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
